

Unique.

The client's objective:

More competitive.

Central to all of our activities, our technology and our service, are the benefits that we offer to our clients. Our aim is to make you more competitive. Our PET preform tools, hot runner systems and injection molds, as well as our new developments, are setting new standards in productivity, reliability

and future-proofing. MHT means innovative solutions. Established as recently as 1996, our company is already a technological leader in PET injection mold tools and hot runner systems. With high levels of investment in R&D we are consistently working to extend our market

position. More than 150 highly-skilled employees accept the challenge with professionalism and a real commitment to achieving the company's objectives. After all, every MHT employee has a financial interest in our success and the possibility to become a shareholder in the business.

The technology:

More intelligent.

Future-oriented mold tool design, high precision manufacturing processes - these two clearly-stated aims are the focus of our new technologies. By the application of intelligent engineering coupled with years of experience we have been able, for example, to make major improvements in the efficiency of our high output PET preform molds. New tech-

nology has enabled us, among other things, to significantly reduce cycle times. The result: an evident and constant increase in productivity. In addition we supply hot runner systems and mold tool update kits with which almost every one of our preform molds can be converted to incorporate the latest process technology. We work closely with some

of the world's leading manufacturers of injection molding machines, so our tools and components are perfectly coordinated with each specific machine type. You can be secure in the knowledge that what we supply is a seamless, integrated solution matched to your individual needs.

The benefits:

# More productive.

Productivity is also a question of quality. Which is the reason why we insist on high quality materials, fully tested components, and an all-encompassing quality management system. For you, that means the highest levels of availability (at full output) for your molding machines, the shortest cycle

times, energy-saving operation, and a life-cycle cost analysis second to none. Through our global network of branches and distributors we are always close at hand for technical advice, tool service and maintenance, or upgrading. Our delivery times are also highly competitive. And thanks to

our ingenious tool designers we are able to offer you an optimum mix of maximum productivity and minimum material costs.

The team:

More competent.
