

PRESS RELEASE

MHT to Combine Core Competencies in Hochheim

To improve efficiency, MHT is focusing on streamlining their overall company structure. This strategy will combine the Sales and Engineering departments of their Luxemburg division with the headquarters located in Hochheim/Main Germany. The Luxemburg closure is planned to be finalized during the remainder of the year.

“This restructuring will strengthen our relationships and bring us closer to our customers worldwide and enable us to respond more quickly to market demands” says CEO Christoph Kückels. “The new structure is an important step towards maintaining and improving our product quality”.

MHT manufactures high precision injection molds and hot runners for the packaging industry. MHT manufactures PET preform molds up to 192 cavities for all of the major, well known PET injection machine manufacturers. The company has offices in Germany, USA, Brazil and China.
